

## Release Notes

TO: TransAM Users

DATE: February 29, 2019

TOPIC: TransAM Version 2.9.0

---

The following memorandum describes the new features and fixes that have been released to the TransAM platform. This release consists of new features, and fixes.

### **Platform Improvements – Query Tool Updates**

We are in the process of developing a REST Application Programming Interface (API), that will easily allow our clients to access and integrate data between TransAM and client supported systems. Some API functionality will overlap with that of the Query Tool feature. Prior to the release of the API, updates are being made to the Query Tool in order to facilitate API development. These updates include the following general changes:

- Adding asset related fields that were not previously included in the query tool.
- Updating the labels of existing fields in the query tool.
- Consolidated some fields that served the same purpose, but may have been labelled differently.
- Updated the exported format of some data fields.
- Addressed some filtering and export related issues.

### **Platform Improvements - General:**

- Modifications have been made to “Service Life Calculation Method” editing rules, allowing for each client implementation to be configurable. This means if configured for editing, individual organization users can edit this field in the “Asset Replacement / Rehabilitation Policy”.
- The “Shared Capital Responsibility (Other)” field was added to the Primary Infrastructure asset New Inventory templates for all three classes of Infrastructure.

### **Bug Fixes:**

- Incorrect data was appearing in the “Last View” column of the User sessions report. This has been corrected to display the date and time of a user’s last view in the system.

- The “Book Value” and “Replacement Cost” values within the State of Good Repair report were showing inaccurate values and have been fixed.
- The Primary Mode and Status filters in the Fleet Build feature was not filtering correctly.
- Several fields in each Primary Infrastructure asset New Inventory template were marked as required, and have been changed to optional.
- An extra column was appearing in exported versions of the Inventory reports, which has been removed.
