CAMBRIDGE SYSTEMATICS

Think Forward

Release Notes

TO: TransAM Users

DATE: August 20, 2021

TOPIC: TransAM Version 2.16.0

The following memorandum describes the new features and fixes that have been released to the TransAM platform. This release consists of new features and fixes.

General System Improvements:

- Added remaining grant value to grant profile. Previously the grant profile only included the apportionment of the grant

- Added value restrictions between class/type/subtype to ensure data accuracy

- Added new Scenario functionality including: Allowing users to duplicate a scenario, creation of scenarios when running the SOGR, added a chart showing future expenditures, added shadow projects to scenarios, and more

- When moving assets and projects between years, the system now updates the replacement costs based on these changes

- Uploaded PennDOT training webinar to the user guide videos for PennDOT users

Bug Fixes:

- Some users were not able to access the Budgets page. This has been resolved, ensuring that those with proper access can view the Budgets page

- If an incorrect value was added when adding a new asset, the system was clearing the entry for type/subtype fields, causing the user to have to re-enter the values which were cleared. This has since been resolved.
